

Deep Learning for Breast Cancer Diagnosis Using Mammography

John A. Smith, Maria B. Lee, Chen X. Wei, Priya N. Nair, David O. Brown

1Department of Radiology, Example University, City, Country

ABSTRACT This paper presents a deep learning approach for breast cancer diagnosis. We evaluate convolutional neu

INDEX TERMS Breast cancer, deep learning, mammography, diagnosis

I. INTRODUCTION

Breast cancer remains a leading cause of mortality. Automated diagnosis can assist radiologists.

II. RELATED WORK

Prior work explored machine learning for medical imaging.

III. METHODOLOGY

We describe our network architecture and training procedure.

IV. EXPERIMENTS

We report accuracy and AUC on held-out data.

V. RESULTS

Our model achieves competitive performance.

VI. DISCUSSION

We discuss limitations and future work.

VII. CONCLUSION

We conclude with summary remarks.
